

Learning at River View

Computing SEND intent

At River View we want all our curriculum areas to reflect an inclusive approach including computing. We want pupils to develop a positive and enthusiastic attitude towards using and applying their computing skills. Pupils will be given opportunities to develop a range of knowledge and skills which they can use and apply in a wide variety of contexts and will be used to support learning in other subject areas.

Children with additional needs at River View are supported to use technology to solve problems, developing creative thinking skills and a logical approach when tackling new experiences. Pupils will be given many opportunities and freedom to be creative as they explore the many uses of technology within the world. We want pupils to witness the enormous potential of technology within their lives now and in the future. We aim to give our pupils access to a variety of devices and technology which motivate and excite our pupils to want to learn and experience more. In a rapidly changing world, where technological advancements are made every day, we endeavour for our pupils to have the knowledge, skills and understanding to effectively use current technology and that of the future.
