# **River View Primary School**

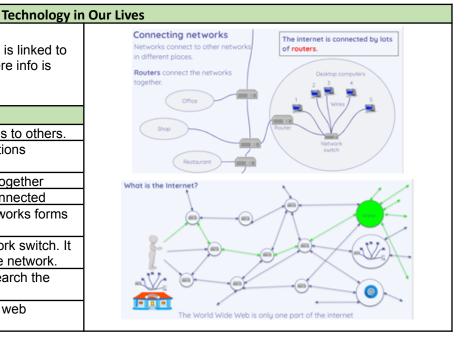

Computing Year 4

**Summer Term** 

### What is a Computer Network?

Devices connect on a network. The network switch is linked to each device. The switch is linked to the server where info is stored. Routers link one network to another.

Computing Skills and Vocabulary	
Connection	Connections are links or joins to others.
Network	Networks are lots of connections working together.
Router	Routers connect networks together
Internet	A network of networks all connected
World Wide Web	A world wide network or networks forms the internet.
Server	A server connects to a network switch. It stores files and manages the network.
Internet browser	A Web browser is used to search the World Wide Web
Web Site	Web sites are found using a web browser.

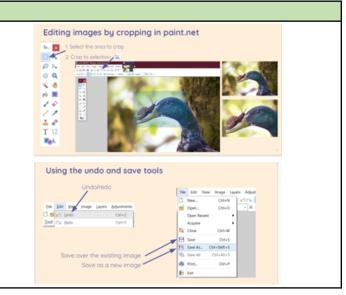

#### Multimedia

### How do we change digital images?

There are computer programs that can capture, create and change images. We can use them to create or manipulate photographs or images on a device.

Computing Skills and Vocabulary	
Image	A picture on a device
edit	change something on a device
arrange	move images and text around on a device
select	highlight or choose an object
crop	change the image by cutting the edges off
save	store a new verision on the device
Pixels	the very small parts that make up the images
rotate	turn the image around in a circle
flip	reverse the image

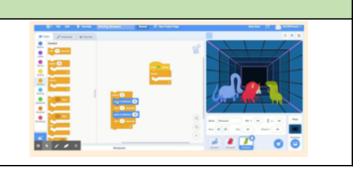

### Coding

## How do we use loops to create shapes?

Sequences of blocks create the code or algorithm in scratch. They give instructions to the sprite or character. Sets of blocks can be used in loops and repeated a chosen number of times.

Computing Skills and Vocabulary	
repeat	A set number of repeats or forever.
value	The number you use within the code

loop The sequence of code or blocks that you choose to repeat.
